Duty to Furnish Information According to Article 33 of EU Regulation No 1907/2006 (REACH)

Dear Sir/Madam,

The European Regulation EC1907/2006 on the registration, authorization and restriction of chemicals (REACH) came into effect in the European Union on June 1, 2007. The regulation aims at identifying and continuously reducing the exposure of both humans and the environment to chemical products.

Within the meaning of this regulation, MICROSNE GmbH & Co. KG is a so-called "downstream user" of chemical products.

As customer of MICROSENS GmbH & Co. KG you receive only non-chemical products from us. Under normal and reasonable operating conditions, no substances should be released.

Based on our current state of knowledge our products also do not contain substances above 0.1% of the product weight, which are in the list of substance of very high concern (SVHC, dated 17.01.2023).

Being a leading manufacturer of electronic equipment for optical data networks MICROSENS GmbH is aware of its obligations, in particular its duty to furnish information according to Article 33 of the regulation.

Therefore we are in close contact to our suppliers and will inform our customers if one of products will contain one of the substances of the SVHC with more than 0.1 % of the product weight.

Yours faithfully

MICROSENS GmbH & Co. KG
