

Interoperability Is the Key Feature: Brocade Data Center Ready Certification for MICROSENS

Hamm, 14. Oktober 2014 – At the end of August, the MSP 1000 platform of MICROSENS GmbH & Co. KG was granted the official "Brocade Data Center Ready" certification, which confirms the interoperability of this optic transmission platform with Brocade-based environments in data centers. The comprehensive testing of the WDM platform was successfully performed with various transponder cards at data rates of up to 16 Gbps. In this context, one fact is particularly interesting in terms of future-proof characteristics: The new CXG+ transponder card also passed the certification programme in the stipulated storage area network very successfully. It supports all Fibre Channel data rates from 1G up to 16G, as well as Gigabit Ethernet and 10 GBE, and can be operated in all available chassis of the MSP 1000 platform. This universal application approach protects the investment of carriers, data center operators, and companies in a sustained manner.

Brocade Communications Systems Inc. has been offering the Partner Certification Programme since the year 2000. Numerous companies and carriers do without own, work-intensive connectivity tests and exclusively rely on certified products. In this way, they ensure that these products are seamlessly integrated into a Brocade-based infrastructure. Herbert Wittemann, Head of the Optical Transport Unit at MICROSENS, knows how sensitive customers are with regard to this subject: "The requirements made on data center capacities are continuously changing, but in terms of availability they always stay on the same, high level. We offer our customers flexible and reliable solutions, which can easily and quickly be integrated into existing networks. The Brocade certification is again ample proof of that."

About MICROSENS

Since 1993, MICROSENS GmbH & Co. KG has been standing for fiber optic solutions. As one of the pioneers of fiber optic transmission systems, the internationally active company covers all performance sectors of fiber optic technology. Starting with solutions for future-proof office networking and high-availability in rough environments, the product portfolio ranges from large-scale site networking and interconnection of computing centers up to high-performance Wide Area Networks (WANs). In all these fields of application, MICROSENS provides and ensures efficient, fast, and secure data transfer. As an internationally successful manufacturer, MICROSENS distributes its products on a worldwide scale. In addition to the company headquarters in Hamm in Westphalia (Germany), MICROSENS also has sales subsidiaries in France and Poland to optimally fulfil the diverse requirements of its customers on-site.

About euromicron

euromicron AG is an all-in solution provider for communications, transmission, data and security networks. The network infrastructures of euromicron integrate voice, image and data transfer in wireless mode, via copper cabling, and by means of fiber optic technology.

euromicron develops its market-leading applications, such as security, control, health care or surveillance systems, on the basis of these future-safe network infrastructures.

Based on the competence as a developer and manufacturer of fiber optic components, euromicron AG constitutes a company group with a strong growth and revenue potential. The company is listed at the stock exchange and is marked by its nature as a medium-sized enterprise. It focuses on operative growth, integration, as well as on market penetration, internationalisation, and expansion. Further information at www.euromicron.de
