### Compact power supply for industrial environments (AC/DC)

(Fig. MS700421)

## General

MICROSENS offers special compact power supplies for extremely demanding industrial applications in harsh environments.

The key feature of the power supplies is their insensitivity to electrical interference, which is particularly important for use in fail-safe industrial and manufacturing environments.

Other important features are high efficiency, compact dimensions, low dead weight and easy mounting (snap-on) on DIN rails. The power supplies have a wide range input for AC and DC voltages. Power classes of 60 and 120 W (24VDC output voltage) as well as 60W (48VDC output voltage) are offered, another series with higher power ratings is also available. Output voltage can also be set within a predetermined range. All devices are equipped with an effective overvoltage and overload protection.

The MICROSENS product range for the industrial sector includes, in addition to the compact power supplies described here, active network components of the Entry Line, Profi Line and Profi Line Modular series.

## Mounting

The compact power supply has a sturdy plastic housing with an integrated bracket for DIN rail mounting. It is mounted on 35 mm mounting rails according to DIN EN 50 022. If no DIN rails are used, the power supply unit can be mounted directly on the wall using the enclosed plastic holder (see picture below).

The MICROSENS component is snapped into place by using a snap-on mounting. The optimized heat dissipation makes it easy to connect several units in a row.
